The growth of \$10,000 shown assumes an investment on December 27, 2007, is plotted monthly, reflects the performance of the A share class load waived, includes changes in share price and reinvestment of dividends and capital gains and does not include the effects of sales charges. If sales charges were included, performance would have been lower.

The performance data quoted here represents past performance. Current performance may be lower or higher than the performance data quoted above. Past performance is no guarantee of future results. The investment return and principal value of an investment will fluctuate so that investor's shares, when redeemed, may be worth more or less than their original cost. Total operating expense for the class A shares is 1.49%.

Please review the Fund's prospectus for more information regarding the Fund's fees and expenses including other share classes. For performance information current to the most recent month-end, please call toll-free 877-441-4434.

Convertible bonds combine the fixed income features of bonds, with the capital appreciation potential of stocks. The Miller Convertible Bond Fund may offer investors a measure of downside preservation compared with stocks and additional upside participation compared with traditional bonds. The goal of the fund is to deploy an absolute return seeking strategy and to outperform both stocks and bonds over complete market cycles.

**A blend of debt and equity**

Convertible bonds blend the characteristics of both bond and stock investments. Convertibles seek to provide equity like returns due to the equity component with potentially less volatility due to the bond-like features.

**Long-term diversification potential**

Convertible bonds may be a good option for investors whose goal is to diversify their portfolio.

**Convertibles as part of a multi-asset class portfolio**

Convertibles have provided attractive returns compared to common stocks and bonds. Convertible bonds generally tend to increase in value when interest rates are rising.

**Outperformance vs. Bonds During Rising Rate Environments**

(Periods where the 10-Year Treasury bond yield rose more than 100 bps over full month period)

1 Effective July 1, 2016 Wellesley Investment Advisors, Inc. changed names to Wellesley Asset Management, Inc.  
2 The S&P 500 Total Return Index, a registered trademark of McGraw-Hill Co., Inc., is a market capitalization-weighted index of 500 widely held common stocks. The Bloomberg Barclays U.S. Aggregate Bond index is a market capitalization-weighted index often used to represent investment grade bonds being traded in United States. TRW is the Thomson Reuters Wellesley Absolute Convertible Bond index ("TRW"). The Index is a joint venture between Thomson Reuters and Wellesley Asset Management that was created in January 2013. Index performance for the period 2008 to the creation date is calculated based on a model portfolio maintained by Wellesley Asset Management. TRW is intended to represent a strategy with the goals of absolute returns and outperforming both equities and fixed income over complete market cycles deploying convertible bonds. Wellesley Asset Management has discretion over the selection of index constituents and their weighting in the index. Indexes do not include management fees, transaction costs or other expenses. You cannot invest directly in an index. Sources: Bloomberg, Thomson Reuters.

## Convertible Bond Fund

Number of Holdings<sup>4</sup>: 91**Fund Objectives**

The Fund's primary investment objective is to maximize total return comprising current income and capital appreciation, consistent with preservation of capital. The Fund also seeks to realize a total return that outperforms both the Bloomberg Barclays U.S. Aggregate Bond index and the S&P 500 Total Return Index over full market cycles. There is no assurance the Fund will achieve its investment objectives.

**Investment Strategy**

- Diversifies across market sectors and credit quality, favoring small and mid-sized companies with higher quality balance sheets
- Utilizes a highly disciplined strategy which seeks to enhance investment returns while managing risk

**Investor Profile**

The Fund may be suitable for long-term investors who seek:

- Current income as well as capital growth potential
- An investment which provides the growth potential of equities along with the income and limited downside potential typical of fixed income securities
- A portfolio that invests primarily in convertible bonds issued by US companies

**About Convertible Bonds**

Convertible bonds can be an excellent investment for absolute return long-term investors, through both bull & bear markets. Convertibles can offer equity market exposure while maintaining the conservative characteristics of bonds.

Convertible bonds may outperform equities and bonds over complete market cycles. Our goal is to utilize convertible bonds to accomplish this with less volatility than a typical stock portfolio.

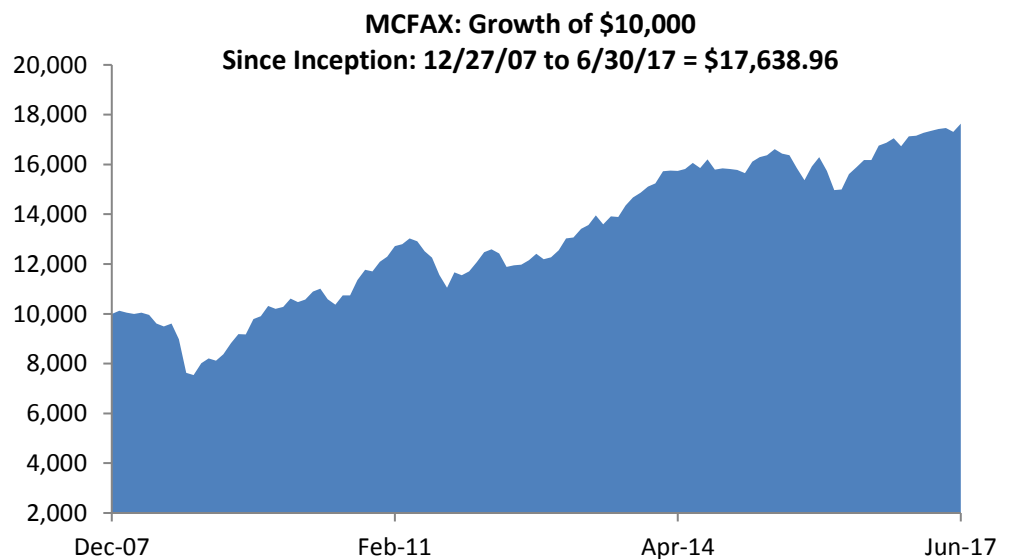

**Performance Summary**

Average Annual Returns (%)

| MCFAX   | 6/30/2017 |
|---|-----------|
| One year  | 9.04      |
| Three year  | 3.17      |
| Five year   | 8.11      |
| 5 year standard deviation <sup>3</sup>              | 6.68      |
| 5 year beta <sup>3</sup>                            | 0.92      |
| 5 year sharpe ratio <sup>3</sup>                    | 1.18      |
| Average Weighted Price of the Fund <sup>5</sup>     | 103.48    |
| Average Effective Maturity of the Fund <sup>5</sup> | 4.23      |

**Breakdown by Sector<sup>4</sup>**

|                        |        |
|------------------------|--------|
| Consumer Discretionary | 10.67% |
| Energy                 | 2.58%  |
| Financials             | 23.76% |
| Health Care            | 16.00% |
| Industrials            | 13.80% |
| Information Technology | 25.41% |
| Materials              | 1.43%  |
| Real Estate            | 0.87%  |
| Treasury               | 5.48%  |

- Beta (cash adjusted) is a measure of relative risk and the slope of regression. Standard Deviation measures a fund's range of total returns and identifies the spread of a fund's short-term fluctuations. Sharpe Ratio measures reward per unit of risk. Beta is vs. the Morningstar Moderate Target Risk Index. (Source: Morningstar)
- As of 6-30-17 Top 10 Holdings are calculated as a percentage of portfolio assets. The tables exclude cash & equivalents and non-investment assets of the Fund. Holdings are subject to change and are not buy/sell recommendations. Synthetic convertible bonds are issued by a financial institution and are convertible into shares of another company; these are classified according to the company they are convertible into rather than the issuer.
- Average Weighted Price: weighting the maturity of each security in the portfolio by the market value of the security, then averaging these weighted figures. Average Effective Maturity: an average of all the maturities of the bonds in a portfolio, computed by weighting each bond's effective maturity by the market value of the security. Effective Maturity: a measure of the anticipated date of complete payment of a bond's principal that incorporates the effects of optional maturity dates for bonds with put or prepayment features.

**About Risk**

Investments in convertible securities subject the Fund to the risks associated with both fixed-income securities, including credit risk and interest risk, and common stocks. A portion of the Fund's convertible securities may be rated below investment grade. Exchangeable and synthetic convertible securities may be more volatile and less liquid than traditional convertible securities. In general, stock and other equity security values fluctuate, and sometimes widely fluctuate, in response to activities specific to the company as well as general market, economic and political conditions. Lower rated fixed-income securities are subject to greater risk of loss of income and principal than higher-rated securities. The prices of lower rated bonds are likely to be more sensitive to adverse economic changes or individual corporate developments. All fixed-income securities are subject to two types of risk: credit risk and interest rate risk. When the general level of interest rates goes up, the prices of most fixed-income securities go down. When the general level of interest rates goes down, the prices of most fixed income securities go up.
